Umthombo Youth Development Foundation 2022 Annual Report

The problem is a shortage of qualified healthcare staff at rural hospitals, whilst rural communities have high disease burdens

Reasons for the shortages of healthcare workers in rural areas include: remoteness of location, lack of employment opportunities for spouses, poor schooling for healthcare workers' children, perceived lack of professional development opportunities and support, among others.

Reasons for high disease burdens in rural communities include: poor quality water and sanitation, poor nutrition and health education, poverty and poor preventative healthcare programmes due to the remoteness of communities.

How the Umthombo Youth Development Foundation addresses this problem

By investing in rural youth, who have an interest and ability to successfully study a health science qualification, and who agree to work at a rural hospital after graduation.

Why rural youth?

Since they come from rural areas, they are more likely to live and work in a rural area than their urban counterparts. In addition, they understand the language and culture of their patients, and thus are better able to communicate with, and understand the healthcare needs of the community.

How we support rural youth to succeed in their studies

Rural students face many challenges at university as they are poorly prepared, both academically and socially. Challenges include poor command of English (the medium of instruction), lack of digital literacy, the fast pace of the academic programme, poor social skills – including lack of confidence – lack of support from family, pressures from family for financial support, and their unrealistic expectations of the university experience, to mention but a few.

To address these challenges and increase the students' chances of success, we provide academic and social mentoring support to all our students, situated across sixteen university campuses. All students are allocated a mentor, who they are required to meet with monthly. The mentor assists students with finding solutions to their academic and social problems — the mentor cannot solve their problems, but helps them strategise how best to address the issues. The mentor then holds the student accountable to implement the agreed strategies and reflect on their effectiveness. Importantly, the mentoring support is compulsory for all students, and starts at the beginning of the academic year, and continues throughout their university journey.

In addition to the monthly mentor meeting, all students are required to complete 4 weeks per annum of work exposure at their local hospital. This allows them to complement their theory with practice and improve their competency.

The final component of the mentoring support is the attendance, by students, of **annual lifeskills** workshops which aim to assist them to manage themselves well, discuss current issues that youth face, gain the necessary soft skills needed in the workplace, and become financially literate, among others.

The mentoring support is complemented with **comprehensive financial support**, the majority of which is provided by the National Student Financial Aid Scheme (NSFAS), to which we provide top-up funding. This ensures that students have all the resources (books, food, accommodation and equipment) needed to focus exclusively on their studies.

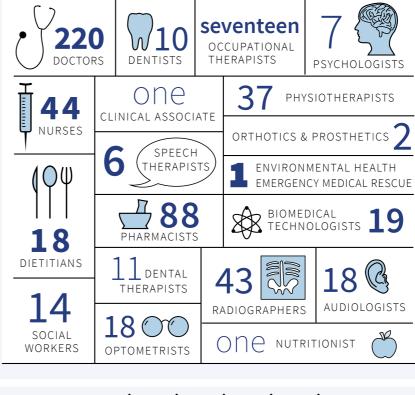

To address the shortages of staff at rural hospitals through an investment in rural youth

Learners from rural schools are selected and supported to study a health science degree

20 rural hospitals

They are funded and mentored to increase their chances of succeeding in qualifying as healthcare professionals

Of the 172 students supported, 92% passed all subjects, whilst 3 were promoted, carrying a subject.

Progression rate = 94%

Umthombo is supporting

197 STUDENTS covering 15 different health-science disciplines:

sufficient doctors for **20** rural hospitals

IMPACT: economically active young nearth professionals improved healthcare services to rural communities

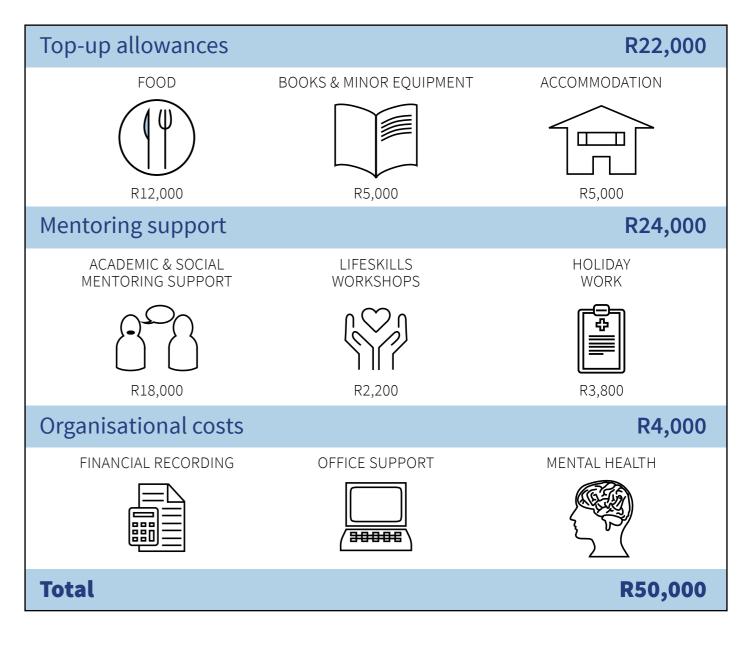

COST OF SUPPORT

Our work is truly transformational as young people come from financially poor families that are unable to support their children's aspirations to study, but through our our financial, academic and social mentoring support, and their hard work, they will, in all likehood, qualify as healthcare professionals. Through our support, 90% of our students graduate, versus the 78% national average graduation rate for health science students.

On graduation, they will go into well-paid employment and assist their siblings to access better education, whilst financially assisting their parents/guardians — lifting them out of poverty. In this way, deep-rooted generational poverty is being broken, and in a relatively short time too -4 to 5 years post graduation.

The cost of this transformational support is broken down below, and amounts to **R50,000 per student per year**.
